

End of Life Product Disposal

ELLIS products can be uniquely identified on packaging or on individual product labels to allow full traceability. Where serial and batch numbers are available, please contact Ellis Patents for detailed instructions on product disposal.

ELLIS products are composed of either metallic and/or polymeric components. Our products are designed in a way that they can be disassembled and segregated into individual components for recycling.

Metallic

ELLIS manufacture products in Stainless Steel, Mild Steel, and Aluminium, which are all readily recyclable.

Polymer

ELLIS use a range of polymers including Polyamides (PA), Polypropylenes (PP), and Thermoplastic Elastomers (TPEs), most of which are recyclable. Where recycling information is not available on the product, please contact our customer service team for further guidance.

For further guidance please contact our customer service team.
